GENERIC ARCHIVING AUTOMATED PROCESSING

BENEFITS:

- ❖ **KEEPS YOU IN CONTROL OF WHEN AND HOW LONG YOUR ARCHIVE PROCEDURE TAKES**
- ❖ **KEEPS YOUR DATA CURRENT AND UP-TO-DATE**
- ❖ **MAINTAINS SYSTEM RESPONSIVENESS**
- ❖ **MANAGES DISK UTILISATION**

EZARCHIVE is specifically designed for the AS400/iSeries and bespoke in-house solutions that use external physical files including GEAC System 21, JD Edwards, BPCS, MAPICS and any other bespoke application.

Unlike old fashioned archiving tools that require a manual start and run for an unknown length of time **EZARCHIVE**'s unique duration facility means you can schedule when and how long it takes; you can also specify the maximum number of records you want processed during any one archive run. It really is that simple.

EZARCHIVE main features:

- ❖ Allows single or multiple file archives.
- ❖ Allows 'from' and 'to' date range selections.
- ❖ Gives the ability to group records by month, week and quarterly blocks and assigns an archive label to the output data.
- ❖ Runs in test mode, so an archive output is created but no original records are removed.
- ❖ Provides data management reports, indicating what files should be archived.
- ❖ Allows configurable archiving/purging.
