Crucial for every company, stock taking can be very time consuming and leave your business down for longer than you expected.

With the Integrated Management Solutions (IMS) Stock Take Ticket system you can cut out the majority of manual labour and cut your company’s downtime by 50%, saving you money and significantly reducing clerical input requirements.

Benefits

The main benefits of this system are:

- It allows for counting of multiple items in warehouse
- Count entry begins immediately from when count is started
- Tickets are validated upon entry
- Clerical input is significantly reduced – there is no pre-sorting of tickets
- Works with IMS Location Control package
- Extensive enquiries are available when needed
- There are no changes to System 21 required – the module works with the core system
- System will automatically produce report of value/% of stock gained or lost
- System sorts data automatically
- Assistance for Auditors of verification of stock balances

Stock-taking

Stock-taking or inventory checking, the physical verification of the quantities and condition of items held in your inventory or warehouse, provides your business with an accurate idea of the number of stock items that it owns. This allows your accountant to reconcile physical stock to the inventory records, highlights variances, and perhaps identifies issues with stock management and control.

But stock-taking can be disruptive and every business wants to have a smooth, successful and stress-free stock take.

With IMS’ extensive knowledge in stock taking, this System 21 module has proved to be very effective for a number of businesses in a variety of different sectors and significantly reduced costs and company downtime.

With a strong breadth of experience, we are able to implement this module with our Location Control package to further improve your business processes and save you money.
IMS Expertise

Infor System 21 offers a flexible, advanced ERP solution suitable for use in a range of industries, including manufacturing, engineering, distribution, public sector and many others.

Combining the systems process management and workflow capabilities with our commercial and technical knowledge, IMS can help your business to map out key business processes to help with management decision making, reduce administration and greatly improve business efficiency.
