System 21 Aurora

Efficient and effective ERP is at the heart of every successful business. At Integrated Management Solutions (IMS) we have been working with Infor System 21 for many years to support our clients in planning, implementing and benefiting from an ERP system that makes a huge impact on the bottom line.

System 21 Aurora helps companies throughout the world manage the complexity of their product lines and supply chains for sustained business success.

System21 Aurora is a suite of software products, combining next-generation enterprise resource planning (ERP) functionality with real-time business process management capabilities.

Designed for mid-to-large-sized manufacturing and distribution companies running on the IBM® System i platform, System21 Aurora delivers capabilities in manufacturing, financials, procurement, customer service, logistics, and after-sales service management.

By delivering business information that is timely, accurate, and comprehensive, System21 helps businesses make insightful strategic decisions.

ERP

Enterprise Resource Planning (ERP) is based on business management software, usually a suite of integrated applications, that the business uses to collect, store, manage and interpret data from many business activities, including:

- Product planning, cost
- Manufacturing or service delivery
- Marketing and sales
- Inventory management
- Shipping and payment

ERP provides an integrated view of core business processes. ERP systems track business resource such as cash, raw material and production capacity, and the status of business commitments such as orders, purchase orders, and payroll.

ERP facilitates information flow between all business functions.
Infor System 21 offers a flexible, advanced ERP solution suitable for use in a range of industries, including manufacturing, engineering, distribution, public sector and many others.

Combining the systems process management and workflow capabilities with our commercial and technical knowledge, IMS can help your business to map out key business processes to help with management decision making, reduce administration and greatly improve business efficiency.

Our strong expertise in business sectors such as food and drink, engineering and automation has helped position IMS as a specialist and leading authority when it comes to fully optimising System 21.

Due to our extensive knowledge and expertise of System 21, we are able to represent ERP at its best. Our understanding of business planning and experience means that we are able to successfully develop and provide you with a specific solution to address your business needs.

IMS is committed to fully optimising the use of IT to provide our clients with practical solutions that improve business practice and resolve business management problems.

IMS can help you to achieve the most from your System 21:

- Simplified design and product development
- Streamlined sourcing and sample management
- Automated sales, speeding up development
- Help the business make insightful strategic decisions
- Support sales and production processes
- Deliver business data when you need it

Our particular strengths with System 21 focus around the business critical areas of:

- Project Management
- Finance
- System 21 Advanced Financial Integrator (AFI)
- Sales
- Electronic Data Interchange (EDI)
- Purchasing
- Inventory
- Manufacturing including Material Requirements Planning (MRP) and Master Production Scheduling (MPS)
- STRM400
- Bespoke modifications using RPG
- Interfaces with third party software
- System audits and health checks
